

ANYWHERE LIGHT GOES<sup>®</sup>

## **We're Anywhere Light Goes®**

On screen, in your pocket, in the sky, under water. For more than 30 years, Optikos has been advancing the science of optics and light in most every industry, field and application—at the everyday and the extraordinary level.

Get to know all that we do. We can solve for you.

## **Optics is what we do. And we do it all.**

Optikos leverages the science of optics and light to improve and enhance the functionality and effectiveness of optically-based-products for businesses and projects all over the world.

- We provide paths and solutions to test and measure your optical and imaging performance.
- We offer standard or custom products and testing services for most any imaginable measurement of lens and camera system.
- We apply our optical engineering expertise to your vision and help make it possible.

## products

### Optikos® Metrology

Our metrology products measure and assure optical performance and image quality for products that range from missile seekers to NASA tracking telescopes, reconnaissance and video systems, medical diagnostic tools, and automotive and cell phone cameras.

Our metrology services are provided through our optical testing lab and offer the most **comprehensive** modulation transfer function (MTF) lens testing and imaging sensor testing available in one location—all services performed by our optical engineers and technicians. Our extensive lab is available for contract metrology for testing both components and complete imaging systems.

The Optical Engineering Experts®

## people

### Optikos® Team

The technical talent offered by the Optikos® team includes dozens of advanced degrees in optics, physics and engineering; and the majority of staff is technically trained and well-recognized within their fields.

We promote intellectual curiosity—it's the foundation of our reputation for being able to solve seemingly impossible challenges.

Known worldwide for **engineering excellence**—the Optikos Quality Management System complies with ISO 9001:2015 and 13485:2016 for medical devices and diagnostics. We're committed to meeting and exceeding our customers' expectations, which is a common result of our teaming process.

## design

### Optikos® Design

Engineering services offer a flexible and scalable resource for your engineering requirements. The Optikos team includes mechanical design and electrical engineering expertise, and is ready to work seamlessly with all design resources to get your job done.

Our proven track record of innovative **problem solving** extends to dozens of patents awarded for technology we developed for ourselves or our clients. Our broad and deep experience enables Optikos to bring in the right suppliers or technology.

Optikos design and manufacturing solutions are found in applications that incorporate optical technology, including military and consumer night vision systems, medical diagnostic tools such as endoscopes and gene sequencing instruments, and consumer applications that include automotive imaging systems, mapping and heads-up and VR/AR displays—**Anywhere light goes®**
